

Overview:

This website is the monthly donation page , in this page you can donate a different sum of money with a monthly withdrawal from the donor bank.

This website must be customizable, and need to have user system that allow someone to edit the text and option

The website creates users for the donators in order to keep track for each donator on their donor tier and objectives they fulfilled.

Users who already donated and they donate again, the new sum will be added to the previous sum and the can get a new tier if the amount is equal or above the entry amount of the tier

Stack:

Front-end : ReactJS

Back-end: ExpressJS

Database: Postgress

Payment gateway: Stripe

Code structure:

Please keep the code organized and well structured, avoid large files if not necessary!

Also build the fron end with react in a professional way, using components and fragments as professionals use.

File structure example:

division-of-tasks

Donation Box Fragment:

- a form with the necessary information for the monthly transactions:
 - Country
 - Email (optional if the the donor already logged in)
 - Last Name (optional if the the donor already logged in)
 - First Name (optional if the the donor already logged in)
 - Password X2 (optional if the the donor already logged in)
 - Credit card details
- Creates a user, if the donor already have a user then it updates the user

User Screen:

- Presents user total donation

- Presents user tier
- Claim objective ( Monthly Donation Program)

Setting fragment:

- Change password
- Change email

Back-End:

API For website:

/api/v1/Website/GET/getContent:

// get website content in order to fill the text into the website structure

Input: None

Return WebsiteContent { [{}]

/api/v1/User/GET/getIsUserExist:

// get if user exist base on email

Input:User Email

Return boolean (True/false)

/api/v1/User/GET/getLoginDetails

// get if user exist base on email

Input:User Email, Password

Return User details {user}

/api/v1/Transaction/GET/isValidCreditCard

// Tells if the the donation went through

Return boolean (True/False)

/api/v1/Transaction/POST/SendCreditCardDetails

// sends the credit card details and return if credit card went through or not

Input: {CreditCard}

Return boolean (True/False)

/api/v1/User/GET/getUser

// returns the user so it all the information can be displayed in the user profile screen

Input: Email, Password (hash)

Return boolean (True/False)

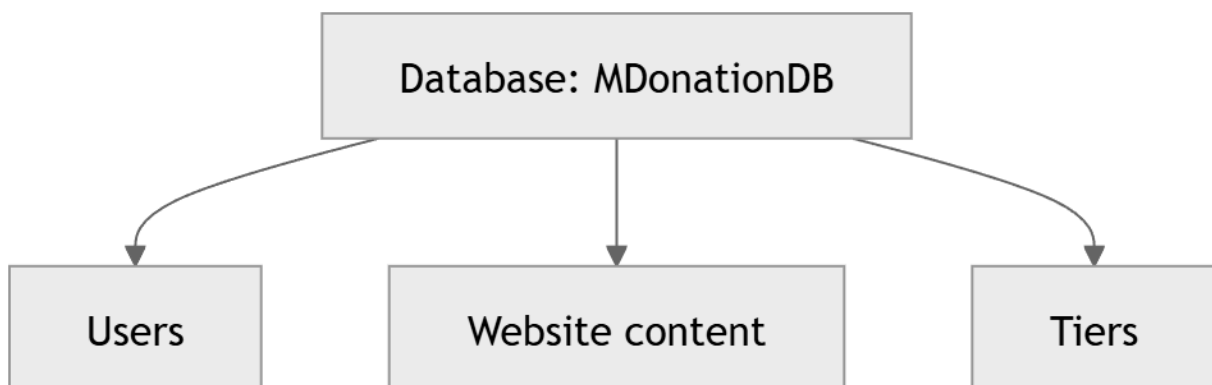

DB:

Database: MDonationDB

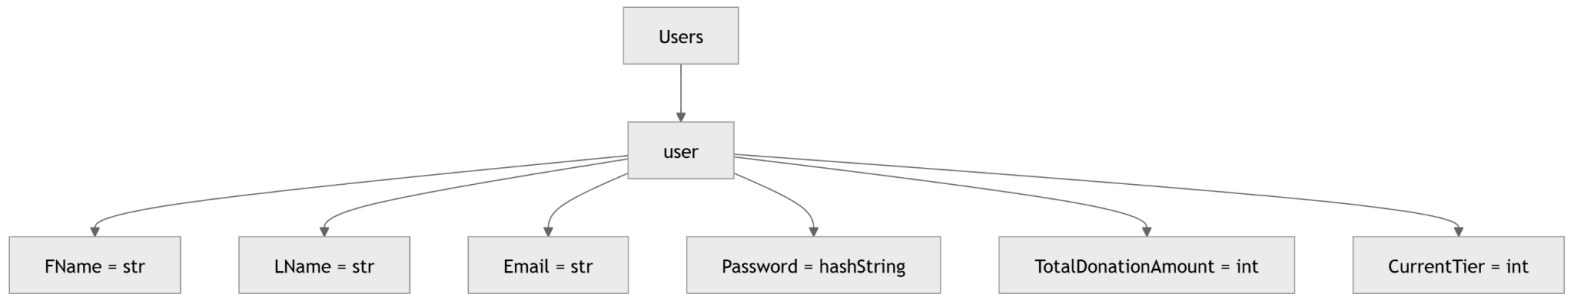

This Database stores:

- Users: {user: FName = str, LName = str, Email = str, Password = hashString , TotalDonationAmount = int, CurrentTier = int}
- Website content:
 - Projects Detail: ProjectName, Details
 - Website Text: Head = str, subtitle = str, Body = str,
 - Donation Boxes text: {DonationBox: Tile = str , Amount = int, Tier details = int, BottonText = "Donate"?}
- Tiers:
 - Tier 1: [{user}] // tier 1 users
 - Tier 2: [{user}] // tier 2 users
 - Tier 3: [{user}] // tier 3 users
